CLEAN, HYGIENIC SOLUTION FOR YOUR TEAM

Shift Changes Made Easy

The Snaplock System offers a hygienic and efficient solution for work environments with frequent user turnover. Its interchangeable earpieces allow for easy cleaning and sanitation between shifts, while the connected cable and PTT button reduce wear and tear on the radio.

Jennifer D.
Store Owner

"As a supervisor in a fast-paced manufacturing facility, communication is crucial. The Snaplock Earpiece System has been a game-changer for our team. The hygienic, snap-on earpieces eliminate the concern of cross-contamination between shifts, which is a huge plus."

Choose Your Perfect Setup

Experience the freedom to select the ideal earpiece for your team, knowing you're investing in a reliable and efficient system that enhances safety and productivity.

Mix and match from our wide range of earpieces to create your perfect team's setup, ensuring optimal comfort and performance for every user. Snaplock delivers the perfect blend of performance, flexibility, and value.

2-Wire Acoustic Tube Setup

The 2-Wire Snaplock system is the ideal choice for retail teams requiring enhanced flexibility and control. This setup, with its robust snap-lock connection for hygienic earpiece swaps, provides a durable and customizable solution, enabling clear, hands-free communication without compromising on user comfort or operational efficiency.

1-Wire Acoustic Tube Setup

This setup integrates the microphone and earpiece into a single unit, connected directly to the radio, minimizing cable clutter and maximizing ease of use. The Snaplock feature still allows for quick earpiece changes for hygiene, while the single-wire design ensures a discreet and comfortable experience for retail staff, facilitating clear communication and seamless customer service.
